About the Northwest Regional Industrial Training Program

The Northwest Regional Industrial Training Project is coordinated and funded by the Northwest Energy Efficiency Alliance (NEEA), a private non-profit organization funded by Northwest utilities and Bonneville Power Administration. NEEA and its stakeholders subsidize up to 85% of the cost to attendees, which means the registration fee is significantly less than the average price in the marketplace.

NEEA works in collaboration with its stakeholders and strategic market partners to accelerate the sustained market adoption of energy-efficient products, technologies, best practices. NEEA’s market transformation efforts address energy efficiency in homes, businesses, and industry.
